

Data Scientist Interview Questions

50 Common Data Scientist Interview Questions

1. What is Data Science?
2. Explain the difference between supervised and unsupervised learning.
3. What is overfitting and how can it be prevented?
4. What is underfitting?
5. Explain bias-variance tradeoff.
6. What is cross-validation?
7. What is feature engineering?
8. What is feature selection?
9. What are missing values and how do you handle them?
10. What is normalization?
11. What is standardization?
12. Explain linear regression.
13. Explain logistic regression.
14. What is multicollinearity?
15. What are evaluation metrics for regression?
16. What are evaluation metrics for classification?
17. What is precision and recall?
18. What is F1-score?
19. What is ROC-AUC?
20. Explain decision trees.
21. What is random forest?
22. What is gradient boosting?
23. What is XGBoost?
24. What is clustering?
25. Explain K-Means clustering.
26. What is PCA?
27. What is dimensionality reduction?
28. What is anomaly detection?
29. What is a confusion matrix?
30. What is Naive Bayes?
31. What is support vector machine (SVM)?
32. What are neural networks?
33. What is deep learning?
34. What is CNN?
35. What is RNN?

36. What is NLP?
37. What is tokenization?
38. What is word embedding?
39. What is time-series analysis?
40. What is ARIMA?
41. Explain hypothesis testing.
42. What is p-value?
43. What is correlation?
44. Difference between correlation and causation.
45. What is A/B testing?
46. What is data leakage?
47. What is ensemble learning?
48. How do you deploy a machine learning model?
49. What is MLOps?
50. Describe a data science project you have worked on.
